

Syqe Inhaler

The Syqe Inhaler is a next generation metered dose inhaler. Its breakthrough drug delivery technology introduces precision electronic dose control and inspiration automation, ensuring programmable and consistent activity of drugs in the body.

The Syqe device was designed for the administration of pharmaceuticals and medicinal plants which are contained in a unique cartridge. The cartridge contains VaporChips, pre-loaded with a precise and uniform amount of medicinal material. The inhaler delivers an individually tailored precise dosage for the daily treatment regimen of each patient. The inhaler is simple and friendly to use and can be used unobtrusively.

Benefits of the Syqe Inhaler

Low doses allow pain relief with less undesirable psychological effects

Rapid, safe and precise delivery of cannabinoids

Simple to use with no patient preparation required

Pulse breath technology:

significantly enhances both adherence and absorption by automating complex inspiration techniques.

Electronic selective dose technology:

allows for highly precise doses (in 100-500µg increments) to be tailored to your needs, and altered remotely as needed (with patient consent).

Active flow technology:

adjusts the flow of the aerosols containing the active ingredient to make sure that the dose is consistent regardless of how you breathe in.

If you have any questions regarding the Syqe Inhaler, call us on 1300 4 735 433.

Is Syqe harmful like smoking?

Using medicinal cannabis in the Syqe Inhaler makes it possible to reduce the undesirable psychological effects of the plant and obtain rapid relief, without exposure to the harmful effects of smoking.
